This product supports the following areas of child development.

Fine Motor Skills

Competitive Play

Tactile Stimulation

Inclusive Play

Auditory Stimulation

Games & Puzzles

Description

The Buzz Reactions Game is easy to play and great fun. The game features a narrated introduction with simple instructions, the game involves listening to the voice commands which announce a shape, colour or "buzz" and the player touches the corresponding sensor to score a point. Pretty easy stuff, but as the game goes on you get less time to react and touch the right sensor. Touch the wrong sensor or take too long and it's game over with a clang from the grim-reaper bell. The panel then announces your score. Each game lasts around 40 seconds. This games concept is fully customisable with different shapes, animals, logos and whatever works within the game parameters. Perfect for the school playground or play space. Made from durable and hard-wearing HDPE it will not rot, crack or fade in UV. All AMV Play Panels can be wall mounted or mounted onto posts fixed into the ground. Multiple panels can installed side by side or back to back. Please ask for further details of the options available.
